

- 1) This pinout is for the EMUL-ST10 and EMUL166. The industry specification is the same except the two end pins at each end of the 4 connectors (16 pins total) are not connected (nc).
- 2) Pin 1 of the adapter is indicated by a triangle in one corner on the adapter and on the Phytect KitCon 167 board. The connectors shown are soldered on to the target board.
- 3) The 10 pin header shown is used for XBUS peripherals coming off certain daughtercards. This connector is shifted in this diagram for clarity purposes. Contact Nohau for more information.
